Elastic Design of Single-Span Steel Portal Frame Buildings to Eurocode provides design formulae for steel portal frames. It advises that to determine approximate bending stresses in a steel portal frame, the following formulae can be used: $M_E = wL^2(3+5m)/16N$ and $M_A = wL^2/8+mME$ M_E is the bending moment in the eave joints of the steel portal frame

Steel portal frame

A portal frame building comprises a series of transverse frames braced longitudinally. The primary steelwork consists of columns and rafters, which form portal frames, and bracing. The end frame (gable frame) can be either a portal frame or a braced arrangement of columns and rafters.

Design of Single-Span Steel Portal Frames to BS 5950-1:2000

The design of steel portal frames was comprehensively covered in BS 5950-1 which devoted a whole section to advice on portal frame design. BS EN 1993-1-1 does not cover portal frames in such depth; design principles and general application rules are provided, not detailed and exhaustive design rules. Software packages based on the detailed treatment in BS 5950-1 have been used for many years and this means at present, most computer-designed portal frames are based on BS 5950-1.
