Robinson Stokes
1948 presented a simple theory of electrolyte hydration and derived an equation by which to calculate activity coefficients for electrolytes. The equation contains two adjustable parameters, the effective size and the hydration number of the electrolyte.

Electrolyte Solutions: Second Revised Edition

In extending the UNIQUAC model to electrolyte systems, we follow the same principle as in the extended NRTL equations proposed by Cruz and Renon (1978) and Chen et al. (1980, 1982), i.e. the excess Gibbs function is a sum of a local composition term and one or more terms, which take into account the special properties of
