## **Hot Splicing Material 2 - REMA TIP TOP**

Step splicing techniques are normally preferred for better hot vulcanization of conveyor belt. Bias cut should be  $0.4 \times B$ , where B is width of belt. Let us consider, if we have conveyor belt of having width of 1400 mm then we must have to take bias cut of dimension of 560 mm. Direction of splicing step

Conveyor belt splicing can be made in  
three ways: – First type is the classic  
vulcanization, called:”hot  
vulcanization” which is made with a  
vulcanizing press at a temperature of  
145-155 °C. – The second  
vulcanization type is the “warm  
vulcanizing”. This type of vulcanizing  
is realized with special materials,
